One-Click Setup

DealScout includes Docker packaging for the frontend, backend, and database.

- Install Docker Desktop.
- Extract the DealScout source folder.
- Windows: double-click setup.bat.
- macOS/Linux: run chmod +x setup.sh && ./setup.sh.
- Open http://localhost:3000.

SETUP TIP

Speak clearly, demonstrate the real flow, and separate implemented behavior from planned enhancements.

What Docker Starts

Docker Compose creates a portable three-service environment.

- frontend: builds React and serves it through Nginx.
- backend: runs FastAPI on the internal network.
- mongodb: stores search history in a named volume.
- Nginx forwards /api requests to the backend.

SETUP TIP

Speak clearly, demonstrate the real flow, and separate implemented behavior from planned enhancements.

Optional Live Provider

Sample prices work without credentials. Live shopping requires a server-side key.

- Create a .env file beside docker-compose.yml.
- Add SERPAPI_KEY=your_key.
- Run the setup script again.
- Never place the provider key in frontend code.

SETUP TIP

Speak clearly, demonstrate the real flow, and separate implemented behavior from planned enhancements.

Operations and Login

Use these commands when maintaining the local installation.

- Stop: docker compose down
- Start: docker compose up -d
- Logs: docker compose logs -f
- Reset data: docker compose down -v
- Preview login: preview@dealscout.local / dealscout123
